PRIVATE PILOT Syllabus

by
Irvin N. Gleim, Ph.D., CFI
and
Garrett W. Gleim, CFI

ABOUT THE AUTHORS

Irvin N. Gleim earned his private pilot certificate in 1965 from the Institute of Aviation at the University of Illinois, where he subsequently received his Ph.D. He is a commercial pilot and flight instructor (instrument) with multi-engine and seaplane ratings and is a member of the Aircraft Owners and Pilots Association, American Bonanza Society, Civil Air Patrol, Experimental Aircraft Association, National Association of Flight Instructors, and Seaplane Pilots Association. Dr. Gleim is the author of flight maneuvers and practical test prep books for the sport, private, instrument, commercial, and flight instructor certificates/ratings and is the author of study guides for the remote, sport, private/recreational, instrument, commercial, flight/ground instructor, fundamentals of instructing, airline transport pilot, and flight engineer FAA knowledge tests. Three additional pilot training books are *Pilot Handbook*, *Aviation Weather and Weather Services*, and *FAR/AIM*.

Dr. Gleim has also written articles for professional accounting and business law journals, and is the author of widely used review manuals for the CIA (Certified Internal Auditor) exam, the CMA (Certified Management Accountant) exam, the CPA (Certified Public Accountant) exam, and the EA (IRS Enrolled Agent) exam. He is Professor Emeritus, Fisher School of Accounting, University of Florida, and is a CFM, CIA, CMA, and CPA.

Garrett W. Gleim earned his private pilot certificate in 1997 in a Piper Super Cub. He is a commercial pilot (single- and multi-engine), ground instructor (advanced and instrument), and flight instructor (instrument and multi-engine), and is a member of the Aircraft Owners and Pilots Association and the National Association of Flight Instructors. Mr. Gleim is the author of study guides for the remote, sport, private/recreational, instrument, commercial, flight/ground instructor, fundamentals of instructing, and airline transport pilot FAA knowledge tests. He received a Bachelor of Science in Economics from The Wharton School, University of Pennsylvania. Mr. Gleim is also a CPA (not in public practice).

HELP!!

This is one book in a series of six books designed specifically for persons who aspire to earn a private pilot certificate. These six books are *Private Pilot Syllabus*, *Private Pilot Flight Maneuvers and Practical Test Prep*, *Private Pilot ACS and Oral Exam Guide*, *Private Pilot FAA Knowledge Test Prep*, *Pilot Handbook*, and *FAR/AIM*.

Please submit any corrections and suggestions for subsequent editions to the authors at www.GleimAviation.com/Questions.

Also, please bring this book to the attention of flight instructors, fixed-base operators, and others interested in flying. Wide distribution of this series of books and increased interest in flying depend on your assistance and good word. Thank you.

Environmental Statement -- This book is printed on high-quality, environmentally friendly groundwood paper, sourced from certified sustainable forests and produced either TCF (totally chlorine-free) or ECF (elementally chlorine-free). Our recyclable paper is more porous than coated paper, so we recommend marking it with a non-bleed-through highlighter.

Our answers have been carefully researched and reviewed. Inevitably, there will be differences with competitors' books and even the FAA. If necessary, we will develop an UPDATE for PPSYL. Visit our website or email update@gleim.com for the latest updates. Updates for this edition will be available until the next edition is published. To continue providing our customers with first-rate service, we request that technical questions about our materials be sent to us via the feedback links within the online components. We will give each question thorough consideration and a prompt response. Questions concerning orders, prices, shipments, or payments will be handled via telephone by our competent and courteous customer service staff.

PREFACE

Thank you for choosing GLEIM. Our training materials (books, software, audios, and online) are intuitively appealing and thus very effective in transferring knowledge to you. The Gleim system saves you time, money, and frustration vs. other aviation training programs.

This syllabus will facilitate your studies and training for your private pilot certificate.

1. Please read the following Introduction carefully.
2. The “Lesson Sequence and Times” section on pages 10 and 11 shows ground lessons being completed as you complete flight lessons. We encourage you to work ahead in your ground lessons and begin them (and even complete them) prior to beginning your flight training.
3. Completion of your flight training in 35 or 40 hours is achievable; however, most individuals take 50+ hours. Thus, some flight lessons will take more than one flight to complete.

The OBJECTIVE is to develop “ACS level” proficiency as quickly as possible. “ACS level” means that you can perform at the level required by the FAA’s Airman Certification Standards (ACS).

4. Homework consists of reading and/or studying your Gleim ***Private Pilot FAA Knowledge Test Prep*** book, Gleim ***Private Pilot Flight Maneuvers and Practical Test Prep*** book, Gleim ***Pilot Handbook***, and the Pilot’s Operating Handbook or Operating Limitations for your airplane. Each flight lesson also directs you to review topics and material studied for previous lessons. The Gleim ***FAR/AIM*** book is for reference.

Why is the GLEIM SYSTEM different? It focuses on successful completion, as quickly and as easily as possible. The requirements for earning your private pilot certificate are listed beginning on page 2. This syllabus facilitates your flight training so you achieve an “ACS level” of proficiency on the 45 FAA “tasks” as quickly as possible!

GO FOR IT! Start studying for your FAA knowledge test today. Refer to ***Private Pilot FAA Knowledge Test Prep*** and ***Pilot Handbook***. Start studying for your FAA practical test by reading ***Private Pilot Flight Maneuvers and Practical Test Prep***.

We have an easy-to-follow and easy-to-complete study system. From the very start, we want you to focus on success. This means answering over 80% of the FAA knowledge test questions correctly AND being able to explain and demonstrate the 45 FAA practical test tasks to your CFI at “ACS level” proficiency for airplane single-engine land.

Enjoy Flying Safely!

Irvin N. Gleim

Garrett W. Gleim

October 2017

This syllabus is a step-by-step lesson plan for your private pilot training. The basic requirements of the Federal Aviation Administration (FAA) private pilot certificate are discussed on the following pages. This syllabus is intended to be used in conjunction with the following five Gleim books:

Private Pilot FAA Knowledge Test Prep
Private Pilot Flight Maneuvers and Practical Test Prep
Private Pilot ACS & Oral Exam Guide
Pilot Handbook
FAR/AIM

Your flight instructor will fill out the companion Flight Training Record as you complete each flight lesson. The Flight Training Record should remain at the flight school as a record of your progress.

WHAT ELSE DO YOU NEED?

If you purchased this syllabus as part of the Gleim **Private Pilot Kit**, you will need to purchase a local sectional chart and a Chart Supplement appropriate to your region. They are published every 6 months and 56 days, respectively. You will need a current copy of each for your FAA practical test. Gleim does not include these publications in your kit because there are 37 different sectional charts and seven different Chart Supplements for the conterminous U.S.

Additionally, you will need to purchase a copy of the Pilot's Operating Handbook and/or Airplane Flight Manual (POH/AFM) (or a Pilot Information Manual) for the make and model of your training airplane. Alternatively, you may make a photocopy if a POH/AFM is not available for purchase.

REQUIREMENTS FOR PRIVATE PILOT CERTIFICATE

There are a number of requirements to earn your private pilot certificate. The final step is your FAA practical test, which will be conducted by an FAA examiner. Your practical test will consist of an approximately 1-hour oral exam followed by a 1- to 2-hour flight test. You will be well prepared for your practical test by your CFI and your Gleim pilot training materials. In addition, you must meet the following requirements:

1. Obtain an FAA medical certificate.
 - a. Your medical exam will be conducted by an FAA-designated aviation medical examiner (AME).
 - b. Ask your CFI or call your local flight school for the names and telephone numbers of the AMEs in your area, or visit www.faa.gov/pilots/amelocator for a listing of AMEs by country, county, city, zip code, or last name.
 - c. Use the FAA's MedXPress system to digitally fill out and submit your medical application before arriving at your appointment with the AME.
 - 1) Access MedXPress at <https://medxpress.faa.gov>.
2. Obtain an FAA student pilot certificate. A student pilot certificate will be issued by a Certificated Flight Instructor (CFI), Airmen Certification Representative (ACR), aviation safety inspector (ASI), or designated pilot examiner (DPE).
 - a. Contact a CFI, ACR, ASI, or DPE to schedule an appointment to have your completed and signed FAA Form 8710-1, *Airman Certificate and/or Rating Application*, processed and submitted to the FAA's Airman Certification Branch. The web address is <https://iacra.faa.gov>.
 - 1) Make sure to bring the following documents to your appointment:
 - a) Your completed and signed application
 - b) An acceptable form of photo identification
 - c) Documents necessary to verify citizenship, such as a U.S. birth certificate or U.S. passport
 - b. Your instructor or FBO will be able to recommend the most convenient way of obtaining a student pilot certificate.
 - c. Additionally, you may contact your regional FAA Flight Standards District Office (FSDO) and ask for the contact information of ASIs and DPEs in your area. To find the phone numbers of your regional FAA FSDO, visit the FAA's FSDO website at www.faa.gov/about/office_org/field_offices/fsdo.
3. Pass your FAA pilot knowledge test, which consists of 60 multiple-choice questions and is administered at an FAA-designated computer testing center. You will attend one of hundreds of computer testing centers after you have prepared for your test. Everything you need to prepare for your FAA pilot knowledge test is in your Gleim **Private Pilot FAA Knowledge Test Prep** and **Pilot Handbook** books. Gleim **FAA Test Prep Online** will facilitate your study. (To find out exactly what to expect from the computer testing center of your choice, use FAA Test Prep Online's convenient vendor emulation testing format.) We have estimated 35 hours for complete preparation for your pilot knowledge test. You may turn to page 8 for instructions on how to begin at any time.
4. Undertake flight training as described in Lessons 1 through 26 beginning on page 33. Many of the lessons will require more than one flight to complete. We also have provided space for your instructor to record extra flights within each lesson as needed to make you comfortable and proficient.

5. Pass your FAA practical test. See ***Private Pilot Flight Maneuvers and Practical Test Prep***.

The **KEY TO SUCCESS** in your flight training, which also minimizes cost and frustration, is your study and preparation at home before flying with your flight instructor. The more you know about flying, flight training, and each flight lesson, the better you will do.

The importance of home study certainly applies to piloting. You should arrive at each of your flight lessons ready to fly. Your flight training will be completed faster, you will save money, and you will have a far more productive and enjoyable experience.

It's fun to be successful! Be overly prepared before you get to the airport for each flight lesson.

PART 141 VS. PART 61 SCHOOLS

The Code of Federal Regulations, Title 14: Aeronautics and Space (14 CFR) lists the requirements to obtain your private pilot certificate. Flight schools can conduct your training by following either 14 CFR Part 141 or 14 CFR Part 61.

A Part 141 flight school is issued a pilot school certificate by the FAA after applying to the FAA and meeting certain requirements. A Part 141 flight school's syllabus is approved by the FAA during this certification process. Thus, if you are using the Gleim ***Private Pilot Syllabus*** in a Part 141 flight school, it must be used in your training.

The majority of flight schools, and flight instructors not associated with a flight school, provide the required training as specified under Part 61.

The major difference between Part 141 and Part 61 training is in the minimum amount of total flight time and solo flight time. Generally, a Part 141 school is more regimented than a Part 61 school; thus, the FAA set the minimum flight time at 35 hours under Part 141 and 40 hours under Part 61. However, the 35- vs. 40-hour minimum requirement is NOT relevant because most people require additional time to complete their private pilot training.

You should select a flight instructor and/or flight school that you are comfortable with rather than being concerned with whether the training is conducted under Part 141 or Part 61. This syllabus meets the requirements for either Part 141 or Part 61.

The Gleim syllabus has been reviewed by the FAA in Washington, D.C., and found to adequately meet the requirements of a syllabus under Part 141 or Part 61, as appropriate (see FAA letter on the back cover). Thus, the Gleim ***Private Pilot Syllabus*** can be used by any Part 141 school with minimum effort. We suggest that the school write a letter to its FAA inspector advising the FAA of the school's intent and the names of students who are going to be trained under this Gleim syllabus.

If a Part 141 school cannot or will not use this syllabus, consider finding another Part 141 or Part 61 school for your training OR please call Gleim at (800) 874-5346 if you have questions or problems.

PART 141 STUDENT INFORMATION

Enrollment Prerequisites

A student must hold a student, sport, or recreational pilot certificate before enrolling in the solo flight phase of the private pilot certification course.

Solo Flight Requirements

Before a student can fly solo, (s)he must complete the specified training, pass a presolo knowledge test, and receive the required logbook endorsements from his or her flight instructor.

Graduation Requirements

The student must complete the training specified in this syllabus, with a minimum of 35 hours of ground training in the specified aeronautical knowledge areas and a minimum of 35 hours of flight training (20 hours of dual and 5 hours of solo). These requirements are reflected in the Gleim Flight Training Syllabus beginning on page 29.

Stage Checks

The student must score a minimum of 80% on the stage one and two knowledge tests at the completion of each stage in the ground training syllabus and must score a minimum of 80% on a comprehensive end-of-course knowledge test at the conclusion of the training.

The student must satisfactorily complete a stage one and two flight check at the completion of each stage of the flight training syllabus. And finally, the student must satisfactorily complete the end-of-course flight test.

Credit for Previous Training

The student may be given the following credit toward this private pilot certification course for previous pilot experience and knowledge [14 CFR Sec. 141.77(c)]:

1. If the credit is based on a Part 141 training course, the credit may be 50% of the requirements for this course.
2. If the credit is based on a Part 61 course, the credit cannot exceed 25% of the requirements for this course.

The receiving school will determine the amount of course credit to be given, based on a proficiency test, a knowledge test, or both.

EXPLANATION OF *PRIVATE PILOT TRAINING RECORD*

Also available separately from this syllabus is the Gleim *Private Pilot Training Record*. This record is provided for flight schools that conduct training under 14 CFR Part 141, which requires that detailed training records be maintained for each student. When properly completed, the training record booklet will meet the training record requirements of Part 141.

Training Record Elements

The training record consists of three main sections:

- The front cover contains student personal information and information about the training course.
- The back cover serves as a ground training record and student flight evaluation record.
- The inside of the booklet consists of a flight training record, specific flight lesson records, and a separate record of instructor endorsements.

Using the Private Pilot Training Record

Front Cover: The front cover of the training record should be filled out by the student, his or her flight instructor, and the chief flight instructor at the time of enrollment. Spaces provided to record credit awarded for previous ground and flight training should be completed by the chief instructor. The chief instructor also should complete the enrollment certificate (found on page 87 of this syllabus) and place it in the training record.

At the completion of training, the chief instructor should complete the information on the front cover, as appropriate (e.g., graduation, transfer, or termination). If the student has graduated, the graduation certificate (found on page 89 of this syllabus) should be completed and placed in the training record.

Back Cover: The ground training record should be filled out by the instructor after each ground lesson is completed, regardless of whether ground training is being conducted formally or as a self-study program. The time spent and date of completion should be noted and the record initialed by both the student and the instructor.

The stage and end-of-course test records should be filled out by the instructor after each stage and end-of-course test has been taken by the student, graded, and reviewed with the instructor. The date of the test, the result, and the date of the review should be noted. The record should then be initialed by the student and signed by the instructor. Each stage and end-of-course test answer sheet should also be placed in the training record.

The student flight evaluation records should be filled out by the instructor following the presolo knowledge test and evaluation and by the chief instructor after each stage check. The date and result of the end-of-course test should be noted and the record initialed by the student and signed by the instructor or chief instructor (the chief instructor must sign the record for each stage check).

Inside: The flight training record consists of three parts:

1. The record of instructor endorsements is a record of information related to each flight instructor endorsement that is pertinent to the course of training,
2. The flight training record is a chronological record of each training flight that is made during the course, and
3. The flight lesson record is an itemized record of the student's performance on the lesson items listed in each specific flight lesson.

AIRPLANE(S) AND LOCAL AIRPORT(S) WORKSHEETS

The airplane(s) worksheet on page 6 is to be used as a study reference of fuel, oil, and airspeeds for the airplane(s) you may use during your training. The local airport(s) worksheet (on page 7) is to be used as a study reference of elevation, radio frequencies, traffic pattern direction, and runway lengths at your primary airport and any other local airports you may use during your training.

GLEIM PRIVATE PILOT SYLLABUS

This syllabus consists of a ground training syllabus and a flight training syllabus. The ground and flight training may be done together as an integrated course of instruction, or each may be done separately.

This syllabus was constructed using the building-block progression of learning, in which the student is required to perform each simple task correctly before a more complex task is introduced. This method will promote the formation of correct habit patterns from the beginning.

Ground Training Syllabus

The ground training syllabus contains 11 lessons, which are divided into two stages. The ground training syllabus meets the training requirements of 14 CFR Part 61 and Appendix B to 14 CFR Part 141. The ground training can be conducted concurrently with the flight training, with the ground lessons completed in order as outlined in the lesson matrix, beginning on page 10. Ground training may also be conducted as part of a formal ground school or as a home-study program.

It is recommended that the lessons be completed in sequence, but the syllabus is flexible enough to meet the needs of an individual student or of a particular training environment. When departing from the sequence, the instructor is responsible for considering the blocks of learning affected.

Each ground lesson involves studying the appropriate study unit in the Gleim *Pilot Handbook*. After each study unit is completed, you need to answer the questions in the appropriate study unit in the Gleim *Private Pilot FAA Knowledge Test Prep* book and review incorrect responses with your instructor. You may use the **FAA Test Prep Online** or **Online Ground School** to answer the questions in each study unit.

At the end of each stage, you are required to complete the stage knowledge test before proceeding to the next stage. The end-of-course knowledge test is completed after the stage two knowledge test. Shortly after the end-of-course test, you should take the FAA private pilot knowledge test. These knowledge tests will refer you to FAA figures found on pages 77 through 86 and on the inside front and back covers.

If this ground training is home study, we recommend that you complete the syllabus as quickly as possible and pass the FAA private pilot knowledge test so you will have more time to prepare for your flight lessons.

The Gleim **FAA Test Prep Online** can be used to answer the questions at the end of each ground lesson. Our FAA Test Prep Online contains the FAA figures and outlines in addition to the questions.

FAA Test Prep Online will allow you to select either Study Mode or Test Mode. In Study Mode, the software provides you with an explanation of each answer you choose (correct or incorrect). You design each Study Session:

- Topic(s) and/or FAA learning statement codes you wish to cover
- Number of questions
- Order of questions -- FAA, Gleim, or random
- Order of answers to each question -- Gleim or random
- Questions marked and/or missed from last session -- test, study, or both
- Questions marked and/or missed from all sessions -- test, study, or both
- Questions never seen, answered, or answered correctly

In Test Mode, the software emulates the operation of the FAA-approved computer testing companies. Thus, you will have a complete understanding of exactly how to take an FAA pilot knowledge test before you go to a computer testing center. When you finish your test, you can and should study the questions missed and access answer explanations.

Flight Training Syllabus

The Part 141 flight training syllabus contains 26 lessons (28 lessons if Part 61), which are divided into two stages. It is recommended that each lesson be completed in sequential order.

Stage One of the flight training syllabus is designed to provide the student with a foundation of good flying habits for his or her flying career. This stage ends with the student's first solo flight. During this stage, the student will become proficient in the knowledge, procedures, and maneuvers required for solo flight. Prior to the student's first solo flight, (s)he will complete the presolo knowledge test. The instructor is responsible for ensuring that the student meets the applicable requirements of 14 CFR 61.87, Solo Requirements for Student Pilots.

Stage Two is designed to provide the student with the knowledge and skills required for confident, repeated solo flight, including cross country navigation. This stage also addresses night-flying and preparation for the FAA private pilot practical test. Part 141 requires one solo cross-country flight of at least 100 NM, while Part 61 requires a total of 5 hours of solo cross-country flight time, with one flight of at least 150 NM. We have included two additional solo cross-country lessons to meet the Part 61 solo time requirements. These flights are optional and need not be performed if you are using this syllabus under Part 141.

Stage checks. Stage checks are designed to ensure that the student has acquired the necessary knowledge and skill. The stage one check (flight lesson 12) is to ensure that the student is competent for safe solo flight. The stage two check (flight lesson 25) is a cumulative review, and the end-of-course test (flight lesson 26) is a final check before issuing a Part 141 graduation certificate.

The chief flight instructor (Part 141) is responsible for ensuring that each student accomplishes the required stage checks and end-of-course test. The chief flight instructor may delegate authority for conducting stage checks and end-of-course test to the assistant chief flight instructor or a check instructor.

Stage checks will be used as a review by instructors training under Part 61 to ensure that the student has the appropriate knowledge and skills.

Sequence of a flight lesson. Each flight lesson will begin with a preflight briefing. During this time, the instructor should first answer any questions the student may have from the previous lesson. Next, the instructor will brief the student on the lesson content, including the objectives, maneuvers, expected student actions, and completion standards. The instructor should discuss the knowledge, risk management, and skill elements appropriate for the flight. In addition, during this briefing, the instructor will evaluate the student's preparation for the lesson. Prior to a solo flight, the instructor must review with the student the maneuvers to be done, the objective of the lesson, and the completion standards.

During the flight portion of the lesson, the instructor should begin with those maneuvers listed as review before introducing new maneuvers. The time required for each lesson will vary depending on the airport and the location of the training areas.

At the end of each lesson, the instructor will conduct a postflight critique and a preview of the next lesson. This time should be used to review the good points during the lesson, to identify and explain fully any problem areas, and to discuss how to correct the problems. The debrief should include a self-assessment by the student, any questions the student may have, and whether completion standards were met.

The length of the preflight briefing and postflight critique will vary with each student and with his or her degree of preparedness for the lesson.

Student preparation. The key to minimizing frustration and costs is preparation. You should budget an average of 2 to 4 hours of home study prior to each flight lesson. Learning will be easier when you are fully prepared so that your instructor can maximize the time spent in flight training.

PRIVATE PILOT SYLLABUS GROUND AND FLIGHT LESSON SEQUENCE AND TIMES

The following table lists the sequence of the flight and ground lessons and the minimum time for each lesson. The times listed are for instructor/student guidance only and are not meant to be mandatory times. These times will ensure that the minimum time requirements for aeronautical knowledge and flight training are in compliance either with 14 CFR Part 141, Appendix B, Private Pilot Certification Course, or with 14 CFR Part 61.

Each training flight (solo and dual) must include a preflight briefing and a postflight critique of the student's performance by the instructor. This time will be entered into the logbook as "ground training."

LESSON	Page	Flight						Ground
		Flight Training (Dual)	Solo/ PIC	Dual Cross-Country	Solo Cross-Country	Night	Instrument	Aeronautical Knowledge Training
STAGE ONE								
Flight 1: Introduction to Flight	33	1.0						
Ground 1: Airplanes and Aerodynamics	15							3.0
Flight 2: Four Fundamentals of Flight	34	1.0						
Ground 2: Airplane Instruments, Engines, and Systems	16							3.0
Flight 3: Basic Instrument Maneuvers	35	1.5					0.5

Flight 26: End of Course Test	61	1.5					0.3	
Part 141 TOTALS		29.4	5.6*	3.4	2.0*	3.0	3.0	35.0
Part 61 TOTALS		29.4	10.6**	3.4	7.0**	3.0	3.0	35.0
		Total Times						

*Part 141 requires one solo cross-country flight of at least 100 NM total distance with landings at a minimum of three points; one segment of the flight must have a straight-line distance of at least 50 NM between the takeoff and landing locations. Since no minimum time is required, we have allocated 2 hours for this flight in Flight 20.

**Part 61 requires a minimum of 5 hours of solo cross-country flight time, including one flight of at least 150 NM total distance with landings at a minimum of three points; one segment of the flight must have a straight-line distance of at least 50 NM between the takeoff and landing locations. Flights 20, 20A, and 20B are used to meet these solo cross-country and total solo time requirements. Since only 5 hours of solo cross-country is needed, Lesson 20B may be replaced with 2.0 hours of local solo practice.

USE OF FLIGHT SIMULATION TRAINING DEVICES (FSTDs) AND AVIATION TRAINING DEVICES (ATDs)

FSTDs include full flight simulators (FFSs) and flight training devices (FTDs). A Part 141 approved private pilot course may include training in a full flight simulator or flight training device, provided it is representative of the aircraft for which the course is approved, meets the requirements of 14 CFR 141.41(a), and the training is given by an authorized instructor. Training in a full flight simulator may be credited for a maximum of 20% of the total flight training hour requirements of the approved course ($20\% \times 35 \text{ hours} = 7.0 \text{ hours}$). Training in a flight training device may be credited for a maximum of 15% of the total flight training hour requirements of the approved course ($15\% \times 35 \text{ hours} = 5.25 \text{ hours}$). Training in a combination of full flight simulators and flight training devices may be credited for a maximum of 20% of the total flight training hour requirements of the approved course; however, credit for training in a flight training device cannot exceed the 15% limitation.

Part 61 allows a maximum of 2.5 hours of training in a FSTD. The device must be qualified and approved by 14 CFR Part 60 and the training provided by an authorized instructor.

ATDs include basic aviation training devices (BATDs) and advanced aviation training devices (AATDs). To credit time in an ATD it must be FAA-approved and the time must be provided by an authorized instructor. AC 61-136A provides information and guidance for the use of ATDs.

Gleim X-Plane Flight Training Course

One method of efficient ground training is use of a home simulator. By practicing each lesson on the ground, your time in the airplane will be more effective. Off-the-shelf flight simulator software for use at home may not be approved for official flight training. However, structured practice can enhance your training by providing additional understanding and familiarization with maneuvers and procedures.

Although the flight time may not count toward your training, you will still gain valuable experience to build proficiency and confidence. This can ultimately save you a significant amount of expensive aircraft rental time.

The Gleim X-Plane Flight Training Course integrates flight lessons from the Gleim Pilot Training Syllabus with the ultra realistic X-Plane software. Experience all flight maneuvers at home with instruction, feedback, and post-flight evaluations.

Learn and practice flight maneuvers at home

- ➔ Over 100 training and tutorial videos
- ➔ Flight profiler and evaluation tool
- ➔ Build proficiency and confidence
- ➔ Develop aeronautical decision-making skills
- ➔ Learn maneuvers quickly and economically

X-Plane Flight Training Course includes X-Plane 10. Hardware and peripherals not included.

GROUND TRAINING COURSE OBJECTIVES

The student will obtain the necessary aeronautical knowledge and meet the prerequisites specified in Appendix B to 14 CFR Part 141 (and 14 CFR 61.105) to successfully pass the private pilot knowledge test.

GROUND TRAINING COURSE COMPLETION STANDARDS

The student will demonstrate through stage knowledge tests and school records that (s)he meets the prerequisites specified in Appendix B to 14 CFR Part 141 (and 14 CFR 61.105) and has the aeronautical knowledge necessary to pass the private pilot knowledge test.

<u>Lesson</u>	<u>Topic</u>	<u>Min. Time in Hours</u>

		<hr/> 35.0

STAGE ONE

Stage One Objective

To develop the student’s knowledge of airplanes and the aerodynamic principles of flight. The student will learn about the operation of various airplane systems, airport operations, radio communication procedures, air traffic control (ATC) radar services, and the National Airspace System (NAS). Additionally, the student will become familiar with pertinent Federal Aviation Regulations (14 CFR) and the accident-reporting requirements of the National Transportation Safety Board (NTSB). Finally, the student will learn how to predict airplane performance and how to control the weight and balance of the airplane.

Stage One Completion Standards

Stage One will have been successfully completed when the student passes the Stage One knowledge test with a minimum passing grade of 80%.

GROUND LESSON 1: AIRPLANES AND AERODYNAMICS

Objective

To develop the student’s knowledge of airplanes, the aerodynamics of flight, and airplane stability.

Notes:

STAGE ONE KNOWLEDGE TEST**Objective**

To evaluate the student's understanding of the material presented during Ground Lesson 1 through Ground Lesson 5. The Stage One knowledge test consists of 25 questions on pages 67-69.

ContentLesson

- 1 Airplanes and Aerodynamics
- 2 Airplane Instruments, Engines, and Systems
- 3 Airports, Air Traffic Control, and Airspace
- 4 Federal Aviation Regulations
- 5 Airplane Performance and Weight and Balance

Completion Standards

The lesson will have been successfully completed when the student has completed the Stage One knowledge test with a minimum passing grade of 80%.

STAGE TWO**Stage Two Objective**

To develop the student's knowledge of medical factors and the aeronautical decision-making process related to all flights. The student will learn how weather affects flying. The student will learn how to obtain weather briefings and how to interpret aviation reports, forecasts, and charts. Additionally, the student will learn how to use navigation charts, plotters, flight computers, and flight publications for cross-country flight planning. Finally, the student will learn how to use various navigation systems.

Stage Two Completion Standards

Stage Two will have been successfully completed when the student passes the Stage Two knowledge test with a minimum passing grade of 80%.

<u>Lesson</u>	<u>Topic</u>	<u>Min. Time</u>
6	Aeromedical Factors and Aeronautical Decision Making	2.0
7	Aviation Weather	3.0
8	Aviation Weather Services	2.5
9	Navigation: Charts, Publications, Flight Computers	3.0
10	Navigation Systems	2.5
11	Cross-Country Flight Planning	2.5
	Stage Two Knowledge Test	1.0
	End-of-Course Knowledge Test	2.5

GROUND LESSON 6: AEROMEDICAL FACTORS AND AERONAUTICAL DECISION MAKING

Objective

To develop the student’s knowledge of the medical factors related to flight and to the aeronautical decision making (ADM) process.

<i>Private Pilot FAA Knowledge Test Prep</i>	_____	_____	_____	_____	_____	_____

Notes:

GROUND LESSON 11: CROSS-COUNTRY FLIGHT PLANNING

Objective

To further develop the student’s ability to properly plan a VFR cross-country flight. Additionally, the student is introduced to the procedures to use when lost and when diverting to an alternate airport.

Text References

Pilot Handbook, Study Unit 11, “Cross-Country Flight Planning” (except Subunit 7, “IFR Cross-Country Procedures”)

Notes:

STAGE TWO KNOWLEDGE TEST

Objective

To evaluate the student's understanding of the material presented during Ground Lesson 6 through Ground Lesson 11. The Stage Two knowledge test consists of 25 questions on pages 70-71.

Content

Lesson

- 6 Aeromedical Factors and Aeronautical Decision Making
- 7 Aviation Weather
- 8 Aviation Weather Services
- 9 Navigation: Charts, Publications, Flight Computers
- 10 Navigation Systems
- 11 Cross-Country Flight Planning

Completion Standards

The lesson will have been successfully completed when the student has completed the Stage Two knowledge test with a minimum passing grade of 80%.

END-OF-COURSE KNOWLEDGE TEST

Objective

To evaluate the student's comprehension of the material covered in the ground training course (lessons 1-11) and to determine the student's readiness to take the FAA private pilot knowledge test. The end-of-course knowledge test consists of 60 questions on pages 72-76.

Content

Practice Private Pilot Knowledge Test

Completion Standards

The lesson will have been successfully completed when the student has completed the practice private pilot knowledge test with a minimum passing grade of 80%.

FLIGHT TRAINING COURSE OBJECTIVES

The student will obtain the aeronautical knowledge and experience and demonstrate the flight proficiency necessary to meet the requirements for a private pilot certificate with an airplane category rating and single-engine land class rating.

FLIGHT TRAINING COURSE COMPLETION STANDARDS

The student will demonstrate through the stage checks and school records that (s)he has the necessary flight proficiency and aeronautical experience to obtain a private pilot certificate with an airplane category rating and single-engine land class rating.

<u>Lesson</u>	<u>Topic</u>

21	Maneuvers Review
22	Solo Practice
23	Maneuvers Review
24	Solo Practice
25	Stage Two Check
26	End of Course Test

The following is a brief description of the parts of each flight lesson in this syllabus:

Objective: We open each lesson with an objective, usually a sentence or two, to help you gain perspective and understand the goal for that particular lesson.

Text References: For lessons with new learning items, this section tells you which reference books you will need to study or refer to while mastering the tasks within the lesson. Abbreviations are given to facilitate the cross-referencing process.

Content: Each lesson contains a list of the tasks required to be completed before moving to the next lesson. A task may be listed as a “review item” (a task that was covered in a previous lesson) or as a “new item” (a task which is introduced to you for the first time). Each task is preceded by three blank “checkoff” boxes, which may be used by your CFI to keep track of your progress and to indicate that each task was completed.

There are three boxes because it may take more than one flight to complete the lesson. Your CFI may mark the box(es) next to each task in one of the following methods (or any other method desired):

✓ - task completed to lesson completion standards	D - demonstrated by instructor A - accomplished by you S - safe/satisfactory C - meets or exceeds ACS standards	1 - above lesson standard 2 - meets lesson standard 3 - below lesson standard
---	--	---

The last task in each flight lesson is labeled “Additional items at CFI’s discretion,” and is followed by several blank lines. This area can be used to record any extra items that your CFI feels are appropriate to the lesson, taking into account such variables as weather, local operational considerations, and your progress as a student.

NOTE: CFIs are reminded not to limit themselves to the blank lines provided—use as much of the page as you need.

Completion Standards: Based on these standards, your CFI determines how well you have met the objective of the lesson in terms of knowledge and skill.

Instructor’s Comments and Lesson Assignment: Space is provided for your CFI’s critique of the lesson, which you can refer to later. Your instructor may also write any specific assignment for the next lesson.

Reading Assignments for Flight Lessons

You are expected to be prepared for each flight lesson. Our reading assignments include text references for new tasks to help you understand what is going to happen and how and why you need to do everything **before** you go to the airport.

Next to each new item in the **Content** section, we provide study unit-level references to read in *Private Pilot Flight Maneuvers and Practical Test Prep* (FM) and/or *Pilot Handbook* (PH) and the section to read, if appropriate, in your airplane’s Pilot’s Operating Handbook (POH). You can make use of the comprehensive index in the Gleim books if you need to analyze specific task element-level details.

Study Tips

- As you read the material, attempt to understand the basic concepts.
- Try to anticipate and visualize the concepts and flight maneuvers.
- With this basic knowledge, your CFI can expand on the specific and finer points, especially when explaining how a task is done in your specific airplane.
- After your flight lesson, task items are fresh in your mind; they will make sense, and you should be able to understand and learn more.
- Study review items so you can explain them to your CFI and your examiner.
- After you study, relax and plan a time to begin preparing for the next flight lesson.

STAGE ONE**Stage One Objective**

The student will obtain the basic flying procedures and skills necessary for the first solo flight.

Stage One Completion Standards

The stage will be completed when the student satisfactorily passes the Stage One check and is able to conduct solo flights safely.

<u>Lesson</u>	<u>Topic</u>
	Stage One
1	Introduction to Flight
2	Four Fundamentals of Flight
3	Basic Instrument Maneuvers
4	Slow Flight and Stalls
5	Emergency Operations
6	Performance Maneuvers
7	Review
8	Go-Around and Forward Slip to a Landing
9	Presolo Review
10	Presolo Review
11	First Solo
12	Stage One Check

FLIGHT LESSON 1: INTRODUCTION TO FLIGHT

Objective

To familiarize the student with the training airplane, its operating characteristics, cockpit controls, and the instruments and systems. The student will be introduced to preflight and postflight procedures, the use of checklists, and the safety precautions to be followed. Additionally, the student will be introduced to the effect and use of the flight controls and the local practice area and airport.

--	---
3. Postflight critique and preview of next lesson

Completion Standards

The lesson will have been successfully completed when the student displays an understanding of the airplane's systems, the use of checklists, preflight procedures, and postflight procedures. Additionally, the student will be familiar with the correct use of the controls, the local practice area, and the airport.

Instructor's comments: _____

Lesson assignment: _____

Notes: _____

FLIGHT LESSON 2: FOUR FUNDAMENTALS OF FLIGHT

Objective

To develop the student's skill in the performance of the four basic flight maneuvers (straight-and-level, turns, climbs, and descents). Additionally, the student will be introduced to radio communication procedures, airport markings, and traffic patterns.

 - Power-on stalls (entered from straight flight) - FM 34; PH 1
 - Spin awareness - FM 35; PH 1; POH 3
 - Additional items at CFI's discretion _____
5. Postflight critique and preview of next lesson

Completion Standards

The lesson will have been successfully completed when the student displays proficiency in the four fundamentals of flight by maintaining altitude, ± 250 ft.; airspeed, ± 20 kt.; and heading, $\pm 20^\circ$. During this and subsequent flight lessons, the student will be proficient in the preflight inspection, engine starting, taxiing, the before-takeoff check, and the postflight procedures without instructor assistance. The student will perform normal and crosswind takeoffs without instructor assistance. The student will show an increase in proficiency in traffic patterns and approaches with the instructor still performing the landing. Finally, the student will display an understanding of maneuvering during slow flight, the indications of an approaching stall, the proper recovery procedures, and the conditions necessary for a spin to occur.

Instructor's comments: _____

Lesson assignment: _____

Notes: _____

FLIGHT LESSON 5: EMERGENCY OPERATIONS

Objective

To improve the student's proficiency while maneuvering during slow flight and the recognition of and correct recovery from stalls. Additionally, the student will be introduced to emergency operations and normal landings.

---	---

5. Postflight critique and preview of next lesson

Completion Standards

The lesson will have been successfully completed when the student displays an understanding of the procedures to be used during various emergency operations and will be able to make a normal landing with instructor assistance. Additionally, the student will demonstrate improved proficiency in maneuvering during slow flight and improved recognition of and recovery from stalls. The student will be able to maintain altitude, ± 200 ft.; airspeed, ± 15 kt.; and heading, $\pm 20^\circ$ during straight-and-level flight.

Instructor's comments: _____

Lesson assignment: _____

Notes: _____

FLIGHT LESSON 6: PERFORMANCE MANEUVERS

Objective

To review previous lessons to gain proficiency and to introduce the student to steep turns and ground reference maneuvers.

Text References

Private Pilot Flight Maneuvers and Practical Test Prep (FM)
Pilot Handbook (PH)

Content

1. Flight Lesson 5 complete? Yes ____ Copy of lesson placed in student's folder? Yes ____
2. Preflight briefing
3. Review items
 - Normal and crosswind takeoff and landing
 - Emergency descent
 - Systems and equipment malfunctions
 - Emergency approach and landing

4. New items
 - Steep turns - FM 26
 - Rectangular course - FM 27
 - S-turns - FM 27
 - Turns around a point - FM 27
 - Wake turbulence avoidance - PH 3
 - Additional items at CFI's discretion _____

5. Postflight critique and preview of next lesson

Completion Standards

The lesson will have been successfully completed when the student demonstrates the proper entry procedures and understands how to maintain a specific ground track during the performance of ground reference maneuvers. Additionally, the student will demonstrate increased proficiency in emergency procedures. The student will be able to maintain altitude, ± 200 ft.; airspeed, ± 15 kt.; and heading, $\pm 20^\circ$.

Instructor's comments: _____

Lesson assignment: _____

Notes: _____

FLIGHT LESSON 8: GO-AROUND AND FORWARD SLIP TO A LANDING

Objective

To introduce the student to go-around procedures, forward slip to a landing, and recovery from bouncing and ballooning during landing. Additionally, the student will gain proficiency in takeoffs and landings through concentrated practice.

Text References

Private Pilot Flight Maneuvers and Practical Test Prep (FM)

Content

 - Traffic patterns
 - Recovery from bouncing and ballooning during landing
4. New items
 - Go-around/rejected landing - FM 25
 - Forward slip to a landing - FM 24
 - Dealing with unexpected requests from ATC - CFI
 - Cross airport to opposite downwind - CFI
 - Reverse direction on downwind - CFI
 - Teardrop maneuver back to final approach from the upwind leg due to a runway change - CFI
 - ATC light signals - FM 16
 - Wind shear avoidance - FM 17
 - Additional items at CFI's discretion _____
5. Postflight critique and preview of next lesson

Completion Standards

The lesson will have been successfully completed when the student can demonstrate an understanding of the go-around procedures, forward slip to a landing, and the recovery from bouncing and ballooning during a landing. Additionally, the student will demonstrate the ability to fly a specific ground track during the performance of ground reference maneuvers. In the traffic pattern, the student will be able to maintain altitude, ± 200 ft.; airspeed, ± 15 kt.; and desired heading, $\pm 20^\circ$.

Instructor's comments: _____

Lesson assignment: _____

Notes: _____

FLIGHT LESSON 11: FIRST SOLO

Objective

To develop the student's proficiency to a level that will allow the safe accomplishment of the first supervised solo in the traffic pattern.

Notes: _____

STAGE TWO

Stage Two Objective

The student will be introduced to soft- and short-field takeoffs and landings and night-flying operations. Additionally, the student will be instructed in the conduct of cross-country flights in an airplane using pilotage, dead reckoning, and navigation systems while operating under VFR within the U.S. National Airspace System. Finally, the student will receive instruction in preparation for the private pilot (airplane single-engine land) practical test.

Stage Two Completion Standards

The stage will be completed when the student demonstrates proficiency in soft- and short-field takeoffs and landings. Additionally, the student will demonstrate the ability to conduct night flights safely and plan and safely conduct solo cross-country flights in an airplane using pilotage, dead reckoning, and navigation systems while operating under VFR. Finally, the student will have a thorough understanding of aeronautical decision making and risk management while demonstrating proficiency in all tasks of the private pilot airplane (single-engine land) practical test and meet or exceed the minimum acceptable standards for the private pilot certificate.

<u>Lesson</u>	<u>Topic</u>
13	Second Solo
14	Short-Field and Soft-Field Takeoffs and Landings
15	Solo Maneuvers Review
16	Navigation Systems
17	Dual Cross-Country
18	Night Flight -- Local
19	Night Cross-Country
20	Solo Cross-Country (Part 61/141)
20A	Solo Cross-Country (Part 61)
20B	Solo Cross-Country or Local Flight (Part 61)
21	Maneuvers Review
22	Solo Practice
23	Maneuvers Review
24	Solo Practice
25	Stage Two Check
26	End of Course Test

FLIGHT LESSON 13: SECOND SOLO

Objective

To review previous lessons and to accomplish the student's second supervised solo in the traffic pattern.

Content

1. Flight Lesson 12 complete? Yes ____ Copy of lesson placed in student's folder? Yes ____
2. Preflight briefing
3. Review items (dual)
 - Normal and crosswind takeoff and climb
 - Emergency approach and landing
 - S-turns
 - Turns around a point
 - Normal and crosswind approach and landing
 - Forward slip to a landing
 - Go-around/rejected landing

4. Review items (second solo in traffic pattern)
 - Radio communication
 - Normal and/or crosswind takeoff and climb (3)
 - Traffic patterns
 - Normal and crosswind approach and landing (3 to full stop)
 - After landing, parking, and securing procedures
 - Additional items at CFI's discretion _____

5. Postflight critique and preview of next lesson

Completion Standards

The lesson will have been successfully completed when the student demonstrates solo competence in the maneuvers performed and safely accomplishes the second supervised solo in the traffic pattern. The student will maintain altitude, ±150 ft.; airspeed, ±10 kt.; and heading, ±10°.

Instructor's comments: _____

Lesson assignment: _____

Notes: _____

FLIGHT LESSON 14: SHORT-FIELD AND SOFT-FIELD TAKEOFFS AND LANDINGS

Objective

To introduce the student to the procedures and technique required for short-field and soft-field takeoffs and landings.

Text References

Private Pilot Flight Maneuvers and Practical Test Prep (FM)

Content

1. Flight Lesson 13 complete? Yes ____ Copy of lesson placed in student's folder? Yes ____
2. Preflight briefing
3. Review items
 - Maneuvering during slow flight
 - Power-off stalls
 - Power-on stalls
 - Spin awareness
 - Emergency approach and landing
 - S-turns
 - Turns around a point
 - Steep turns

4. New items
 - Soft-field takeoff and climb - FM 20
 - Soft-field approach and landing - FM 21
 - Short-field takeoff and maximum performance climb - FM 22
 - Short-field approach and landing - FM 23
 - Additional items at CFI's discretion _____

5. Postflight critique and preview of next lesson

Completion Standards

The lesson will have been successfully completed when the student can explain when it would be necessary to use short-field or soft-field takeoff and landing procedures. Additionally, the student will be able to demonstrate an understanding of these procedures. The student will maintain the desired altitude, ±150 ft.; airspeed, ±10 kt.; and heading, ±10°.

Instructor's comments: _____

Lesson assignment: _____

Notes: _____

FLIGHT LESSON 16: NAVIGATION SYSTEMS

Objective

To introduce the student to the proper use of the navigation system(s) installed in the airplane to determine position and track a specified course. Additionally, the student is introduced to more maneuvers while controlling the airplane with reference to the instruments.

<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> Power-on stalls (IR) - FM 34	_____
5. Postflight critique and preview of next lesson

Completion Standards

The lesson will have been successfully completed when the student displays an understanding of the navigation system(s) in the airplane. Additionally, the student will use the correct recovery procedure from unusual attitudes and will be able to maintain control of the airplane by instrument reference and by the use of navigation systems, radio communications, and radar services. All approaches will be stabilized, and the student will maintain the desired airspeed, +10/-5 kt.

Notes: _____

FLIGHT LESSON 17: DUAL CROSS-COUNTRY

Objective

To introduce the student to cross-country procedures that include flight planning, pilotage and dead reckoning, navigation systems, diversion to an alternate airport, and lost procedures.

5. Postflight critique and preview of next lesson

Completion Standards

The lesson will have been successfully completed when the student, with instructor assistance, is able to perform the cross-country flight planning and fly the planned course making necessary off-course corrections and computing groundspeed, ETA, and fuel consumption. The student will display the ability to navigate by means of pilotage and dead reckoning and by any other navigation system. Additionally, the student will understand how to perform lost procedures and a diversion to an alternate airport.

PRESOLO KNOWLEDGE TEST

Airplane make/model: _____

1. List the airspeeds and their definitions for your airplane.

	Airspeed	Definition
V_{S0}	_____	_____
V_{S1}	_____	_____
V_R	_____	_____
V_X	_____	_____
V_Y	_____	_____
V_{FE}	_____	_____
V_A	_____	_____
V_{NO}	_____	_____
V_{NE}	_____	_____

2. The maximum gross weight for your airplane is _____ lb.
3. The maximum takeoff weight for your airplane is _____ lb.
4. Fuel: Maximum capacity _____ gal. of which _____ gal. is usable
 Minimum to start a solo flight _____ gal.
 Grade _____
 Color _____
 Optional grades and colors _____
5. Oil: Maximum capacity _____ qt.
 Minimum to start a solo flight _____ qt.
 Grade _____
6. Compute the location of the center of gravity (CG) for a solo flight with full fuel in your airplane. Is the CG within limits?
7. What is the takeoff ground roll and the distance over a 50-ft. obstacle for your airplane at your airport with full fuel, a temperature of 29°C, 5-kt. headwind, and an altimeter setting of 29.64?

- 8. What is the ground roll and total landing distance over a 50-ft. obstacle for your airplane at your airport with 3/4 fuel, a temperature of 32°C, calm wind, and an altimeter setting of 30.10?
- 9. What are the indications of carburetor icing? When is carburetor heat recommended to be used in your airplane?

10. What are the radio frequencies used at your airport?

Clearance Delivery	_____
ATIS	_____
Ground	_____
Tower	_____
Approach/Departure	_____
CTAF	_____
UNICOM	_____
FSS	_____

11. At your airport:

- a. What runways are available?
- b. What is the direction of the traffic pattern for each runway?
- c. What is the traffic pattern altitude?
- d. In what class of airspace is the airport located?

12. How do you enter and depart the traffic pattern at your airport?

13. What radio communication procedures are required at your airport?

14. Explain the procedures you would use to land at your airport if the communication radio(s) failed.

15. List the meaning of the following ATC light signals:

	In Flight	On Surface
Steady green	_____	_____
Flashing green	_____	_____
Steady red	_____	_____
Flashing red	_____	_____
Flashing white	_____	_____
Alternating red and green	_____	_____

16. What airplane certificates and documents must be on board the aircraft prior to every flight?

17. What personal documents and endorsements must you have before beginning a solo flight?

18. Who is directly responsible and is the final authority as to the operation of your airplane when you are flying solo?

19. You may not fly as a pilot within _____ hours after the consumption of an alcoholic beverage or with _____ % by weight or more alcohol in the blood.

20. Explain the regulatory preflight action requirements.

21. Explain your use of safety belts and shoulder harnesses while flying solo.

22. When aircraft are approaching each other head-on, or nearly so, what action should be taken?

23. Except for takeoff or landing, at what minimum safe altitudes should you operate your airplane?

24. Explain the altimeter setting procedures.

25. When practicing steep turns, slow flight, power-on stalls, and power-off stalls, you should select an altitude that allows the maneuver to be completed no lower than _____.

26. Explain the go-around procedures in your airplane. When would you use the go-around procedures?
27. The best glide airspeed for your airplane (at maximum gross weight) is _____.
 - a. What airplane configuration is specific to obtain the maximum glide?
28. Explain the actions you would take if the airplane engine failed in the following situations:
 - a. Right after liftoff
 - b. During the takeoff climb at an altitude of 100 ft. AGL
 - c. En route
29. Explain the recommended use of flaps for takeoff in your airplane.
30. For a student pilot, what are the minimum visibility requirements?
31. For a student pilot, what are the restrictions to flight above clouds?
32. For a student pilot, what are the limitations of carrying passengers?
33. What are the day-VFR fuel requirements?

END OF EXAM

STAGE ONE KNOWLEDGE TEST

The figures on pages 77 through 86 are from the FAA's *Airman Knowledge Testing Supplement for Sport Pilot, Recreational Pilot, and Private Pilot* book, which is available from your flight school or instructor.

1. An airplane has been loaded in such a manner that the CG is located aft of the aft CG limit. One undesirable flight characteristic a pilot might experience with this airplane would be

- A — a longer takeoff run.
- B — difficulty in recovering from a stalled condition.
- C — stalling at higher-than-normal airspeed.

2. (Refer to Figure 38 on page 83.) Determine the total distance required to land over a 50-foot obstacle.

Pressure altitude = 7,500 ft
 Headwind = 8 kts
 Temperature = 32°F
 Runway = Hard surface

- A — 1,004 feet.
- B — 1,205 feet.
- C — 1,506 feet.

3. (Refer to Figure 40 on page 84.) Determine the approximate ground roll distance required for takeoff.

OAT = 38°C
 Pressure altitude = 2,000 ft
 Takeoff weight = 2,750 lb
 Headwind component = Calm

- A — 1,150 feet.
- B — 1,300 feet.
- C — 1,800 feet.

4. An aircraft is loaded 110 pounds over maximum certificated gross weight. If fuel (gasoline) is drained to bring the aircraft weight within limits, how much fuel should be drained?

- A — 15.7 gallons.
- B — 16.2 gallons.
- C — 18.4 gallons.

5. (Refer to Figure 49 on page 84.) Select the proper traffic pattern and runway for landing.

- A — Left-hand traffic and Runway 18.
- B — Right-hand traffic and Runway 18.
- C — Left-hand traffic and Runway 22.

6. (Refer to Figure 48 on page 85.) What is the difference between area A and area E on the airport depicted?

- A — "A" may be used for taxi and takeoff; "E" may be used only as an overrun.
- B — "A" may be used for all operations except heavy aircraft landings; "E" may be used only as an overrun.
- C — "A" may be used only for taxiing; "E" may be used for all operations except landings.

7. (Refer to Figure 34 on page 82.) Determine the aircraft loaded moment and the aircraft category.

	WEIGHT (LB)	MOM/1000
Empty weight	1,350	51.5
Pilot and front passenger	380	---
Fuel, 48 gal	288	---
Oil, 8 qt.	---	---

- A — 78.2, normal category.
- B — 79.2, normal category.
- C — 80.4, utility category.

8. If a pilot suspects that the engine (with a fixed-pitch propeller) is detonating during climb-out after takeoff, the initial corrective action to take would be to

- A — lean the mixture.
- B — lower the nose slightly to increase airspeed.
- C — apply carburetor heat.

9. After takeoff, which airspeed would the pilot use to gain the most altitude in a given period of time?

- A — V_Y .
- B — V_X .
- C — V_A .

- 10.** What must a pilot be aware of as a result of ground effect?
- A — Wingtip vortices increase creating wake turbulence problems for arriving and departing aircraft.
 - B — Induced drag decreases; therefore, any excess speed at the point of flare may cause considerable floating.
 - C — A full stall landing will require less up elevator deflection than would a full stall when done free of ground effect.
- 11.** A steady green light signal directed from the control tower to an aircraft in flight is a signal that the pilot
- A — is cleared to land.
 - B — should give way to other aircraft and continue circling.
 - C — should return for landing.
- 12.** If a flight is made from an area of high pressure into an area of lower pressure without the altimeter setting being adjusted, the altimeter will indicate
- A — lower than the actual altitude above sea level.
 - B — higher than the actual altitude above sea level.
 - C — the actual altitude above sea level.
- 13.** What change occurs in the fuel/air mixture when carburetor heat is applied?
- A — A decrease in RPM results from the lean mixture.
 - B — The fuel/air mixture becomes richer.
 - C — The fuel/air mixture becomes leaner.
- 14.** If an aircraft is equipped with a fixed-pitch propeller and a float-type carburetor, the first indication of carburetor ice would most likely be
- A — increase of RPM.
 - B — engine roughness.
 - C — decrease of RPM.
- 15.** The most effective method of scanning for other aircraft for collision avoidance during daylight hours is to use
- A — regularly spaced concentration on the 3-, 9-, and 12-o'clock positions.
 - B — a series of short, regularly spaced eye movements to search each 10-degree sector.
 - C — peripheral vision by scanning small sectors and utilizing offcenter viewing.
- 16.** What is the relationship of lift, drag, thrust, and weight when the airplane is in straight-and-level flight?
- A — Lift equals weight and thrust equals drag.
 - B — Lift, drag, and weight equal thrust.
 - C — Lift and weight equal thrust and drag.
- 17.** In what flight condition must an aircraft be placed in order to spin?
- A — Partially stalled with one wing low.
 - B — In a steep diving spiral.
 - C — Stalled.
- 18.** During an approach to a stall, an increased load factor will cause the aircraft to
- A — stall at a higher airspeed.
 - B — have a tendency to spin.
 - C — be more difficult to control.
- 19.** Which instrument(s) will become inoperative if the static vents become clogged?
- A — Airspeed indicator only.
 - B — Altimeter only.
 - C — Airspeed indicator, altimeter, and vertical speed indicator.
- 20.** What effect does high density altitude, as compared to low density altitude, have on propeller efficiency and why?
- A — Efficiency is increased due to less friction on the propeller blades.
 - B — Efficiency is reduced because the propeller exerts less force at high density altitudes than at low density altitudes.
 - C — Efficiency is reduced due to the increased force of the propeller in the thinner air.
- 21.** How long does the Airworthiness Certificate of an aircraft remain valid?
- A — As long as the aircraft has a current Registration Certificate.
 - B — Indefinitely, unless the aircraft suffers major damage.
 - C — As long as the aircraft is maintained and operated as required by Federal Aviation Regulations.
- 22.** If an altimeter setting is not available before flight, to which altitude should the pilot adjust the altimeter?
- A — The elevation of the nearest airport corrected to mean sea level.
 - B — The elevation of the departure area.
 - C — Pressure altitude corrected for nonstandard temperature.
- 23.** What aircraft inspections are required for rental aircraft that are also used for flight instruction?
- A — Annual condition and 100-hour inspections.
 - B — Biannual condition and 100-hour inspections.
 - C — Annual condition and 50-hour inspections.

24. Except when necessary for takeoff or landing, what is the minimum safe altitude for a pilot to operate an aircraft anywhere?

- A — An altitude allowing, if a power unit fails, an emergency landing without undue hazard to persons or property on the surface.
- B — An altitude of 500 feet above the surface and no closer than 500 feet to any person, vessel, vehicle, or structure.
- C — An altitude of 500 feet above the highest obstacle within a horizontal radius of 1,000 feet.

25. If instructed by ground control to taxi to Runway 9, the pilot may proceed

- A — via taxiways and across runways to, but not onto, Runway 9.
- B — to the next intersecting runway where further clearance is required.
- C — via taxiways and across runways to Runway 9, where an immediate takeoff may be made.

STAGE TWO KNOWLEDGE TEST

The figures on the inside front and back covers and pages 77 through 86 are from the FAA's *Airman Knowledge Testing Supplement for Sport Pilot, Recreational Pilot, and Private Pilot* book, which is available from your flight school or instructor.

1. (Refer to Figure 23 on the inside front cover.) (Refer to area 3.) What is the floor of the Savannah Class C airspace at the shelf area (outer circle)?
 - A — 1,200 feet AGL.
 - B — 1,300 feet MSL.
 - C — 1,700 feet MSL.

2. (Refer to Figure 12 on page 77.) The wind direction and velocity at KJFK is from
 - A — 180° true at 4 knots.
 - B — 180° magnetic at 4 knots.
 - C — 040° true at 18 knots.

3. Which statement about longitude and latitude is true?
 - A — Lines of longitude are parallel to the Equator.
 - B — Lines of longitude cross the Equator at right angles.
 - C — The 0° line of latitude passes through Greenwich, England.

4. (Refer to Figure 23 on the inside front cover.) The flag symbols at Statesboro Bullock County Airport, Claxton-Evans County Airport, and Ridgeland Airport are
 - A — outer boundaries of Savannah Class C airspace.
 - B — airports with special traffic patterns.
 - C — visual checkpoints to identify position for initial callup prior to entering Savannah Class C airspace.

5. (Refer to Figure 25 on the inside back cover.) (Refer to area 3.) If Dallas Executive Tower is not in operation, which frequency should be used as a Common Traffic Advisory Frequency (CTAF) to monitor airport traffic?
 - A — 127.25 MHz.
 - B — 122.95 MHz.
 - C — 126.35 MHz.

6. (Refer to Figure 15 on page 77.) In the TAF from KOKC, the clear sky becomes
 - A — overcast at 2,000 feet during the forecast period between 2200Z and 2400Z.
 - B — overcast at 200 feet with a 40 percent probability of becoming overcast at 600 feet during the forecast period between 2200Z and 2400Z.
 - C — overcast at 200 feet with the probability of becoming overcast at 400 feet during the forecast period between 2200Z and 2400Z.

7. (Refer to Figure 52 on page 86.) Traffic patterns in effect at Lincoln Municipal are
 - A — to the right on Runway 14 and Runway 32; to the left on Runway 18 and Runway 35.
 - B — to the left on Runway 14 and Runway 32; to the right on Runway 18 and Runway 35.
 - C — to the right on Runways 14 - 32.

8. (Refer to Figure 28 on page 79.) (Refer to illustration 8.) The VOR receiver has the indications shown. What is the aircraft's position relative to the station?
 - A — North.
 - B — East.
 - C — South.

9. What is the most effective way to use the eyes during night flight?
 - A — Look only at far away, dim lights.
 - B — Scan slowly to permit off-center viewing.
 - C — Concentrate directly on each object for a few seconds.

10. With certain exceptions, Class E airspace extends upward from either 700 feet or 1,200 feet AGL to, but does not include,
 - A — 10,000 feet MSL.
 - B — 14,500 feet MSL.
 - C — 18,000 feet MSL.

11. What minimum radio equipment is required for VFR operation within Class B airspace?
 - A — Two-way radio communications equipment and a 4096-code transponder.
 - B — Two-way radio communications equipment, a 4096-code transponder, and an encoding altimeter.
 - C — Two-way radio communications equipment, a 4096-code transponder, an encoding altimeter, and a VOR or TACAN receiver.

12. (Refer to Figure 25 on the inside back cover.) Determine the magnetic heading for a flight from Fort Worth Meacham (area 4) to Denton Muni (area 1). The wind is from 330° at 25 knots, the true airspeed is 110 knots, and the magnetic variation is 7°E.
 - A — 003°.
 - B — 017°.
 - C — 023°.

13. What values are used for Winds Aloft Forecasts?

- A — Magnetic direction and knots.
- B — Magnetic direction and miles per hour.
- C — True direction and knots.

14. What information is contained in a CONVECTIVE SIGMET?

- A — Tornadoes, embedded thunderstorms, and hail 3/4 inch or greater in diameter.
- B — Severe icing, severe turbulence, or widespread dust storms lowering visibility to less than 3 miles.
- C — Surface winds greater than 40 knots or thunderstorms equal to or greater than video integrator processor (VIP) level 4.

15. When the course deviation indicator (CDI) needle is centered using a VOR test signal (VOT), the omnibearing selector (OBS) and the TO/FROM indicator should read

- A — 180° FROM, only if the pilot is due north of the VOT.
- B — 0° TO or 180° FROM, regardless of the pilot's position from the VOT.
- C — 0° FROM or 180° TO, regardless of the pilot's position from the VOT.

16. The angular difference between true north and magnetic north is

- A — magnetic deviation.
- B — magnetic variation.
- C — compass acceleration error.

17. Which of the following is a correct response to counteract the feelings of hypoxia in flight?

- A — Promptly descend altitude.
- B — Increase cabin air flow.
- C — Avoid sudden inhalations.

18. Pilots are more subject to spatial disorientation if

- A — they ignore the sensations of muscles and inner ear.
- B — visual cues are taken away, as they are in instrument meteorological conditions (IMC).
- C — eyes are moved often in the process of cross-checking the flight instruments.

19. (Refer to Figure 23 on the inside front cover.) What is the approximate position of the aircraft if the VOR receivers indicate the 340° radial of Savannah VORTAC (area 3) and the 184° radial of Allendale VOR (area 1)?

- A — Town of Guyton.
- B — Town of Springfield.
- C — 3 miles east of Briggs.

20. Which conditions result in the formation of frost?

- A — The temperature of the collecting surface is at or below freezing when small droplets of moisture fall on the surface.
- B — The temperature of the collecting surface is at or below the dewpoint of the adjacent air and the dewpoint is below freezing.
- C — The temperature of the surrounding air is at or below freezing when small drops of moisture fall on the collecting surface.

21. What conditions are necessary for the formation of thunderstorms?

- A — High humidity, lifting force, and unstable conditions.
- B — High humidity, high temperature, and cumulus clouds.
- C — Lifting force, moist air, and extensive cloud cover.

22. One weather phenomenon which will always occur when flying across a front is a change in the

- A — wind direction.
- B — type of precipitation.
- C — stability of the air mass.

23. Steady precipitation preceding a front is an indication of

- A — stratiform clouds with moderate turbulence.
- B — cumuliform clouds with little or no turbulence.
- C — stratiform clouds with little or no turbulence.

24. Which type weather briefing should a pilot request, when departing within the hour, if no preliminary weather information has been received?

- A — Outlook briefing.
- B — Abbreviated briefing.
- C — Standard briefing.

25. When may hazardous wind shear be expected?

- A — When stable air crosses a mountain barrier where it tends to flow in layers forming lenticular clouds.
- B — In areas of low-level temperature inversion, frontal zones, and clear air turbulence.
- C — Following frontal passage when stratocumulus clouds form indicating mechanical mixing.

END-OF-COURSE KNOWLEDGE TEST

The figures on the inside front and back covers and pages 77 through 86 are from the FAA's *Airman Knowledge Testing Supplement for Sport Pilot, Recreational Pilot, and Private Pilot* book, which is available from your flight school or instructor.

1. (Refer to Figure 8 on page 78.) What is the effect of a temperature increase from 25 to 50° F on the density altitude if the pressure altitude remains at 5,000 feet?
 - A — 1,200-foot increase.
 - B — 1,400-foot increase.
 - C — 1,650-foot increase.

2. (Refer to Figure 40 on page 84.) Determine the total distance required for takeoff to clear a 50-foot obstacle.

OAT = Std
 Pressure altitude = 4,000 ft
 Takeoff weight = 2,800 lb
 Headwind component = Calm

 - A — 1,500 feet.
 - B — 1,750 feet.
 - C — 2,000 feet.

3. (Refer to Figure 23 on the inside front cover.) Determine the magnetic heading for a flight from Allendale County Airport (area 1) to Claxton-Evans County Airport (area 2). The wind is from 090° at 16 knots and the true airspeed is 90 knots. Magnetic variation is 7°W.
 - A — 230°.
 - B — 213°.
 - C — 210°.

4. (Refer to Figure 36 on page 83.) With a reported wind of south at 20 knots, which runway is appropriate for an airplane with a 13-knot maximum crosswind component?
 - A — Runway 10.
 - B — Runway 14.
 - C — Runway 24.

5. If an aircraft is loaded 90 pounds over maximum certificated gross weight and fuel (gasoline) is drained to bring the aircraft weight within limits, how much fuel should be drained?
 - A — 10 gallons.
 - B — 12 gallons.
 - C — 15 gallons.

6. (Refer to Figure 32 on page 80 and Figure 33 on page 81.) Which action can adjust the airplane's weight to maximum gross weight and the CG within limits for takeoff?

Front seat occupants = 425 lb
 Rear seat occupants = 300 lb
 Fuel, main tanks = 44 gal

 - A — Drain 12 gallons of fuel.
 - B — Drain 9 gallons of fuel.
 - C — Transfer 12 gallons of fuel from the main tanks to the auxiliary tanks.

7. What is true altitude?
 - A — The vertical distance of the aircraft above sea level.
 - B — The vertical distance of the aircraft above the surface.
 - C — The height above the standard datum plane.

8. Radar weather reports are of special interest to pilots because they indicate
 - A — large areas of low ceilings and fog.
 - B — location of precipitation along with type, intensity, and cell movement of precipitation.
 - C — location of precipitation along with type, intensity, and trend.

9. (Refer to Figure 25 on the inside back cover.) (Refer to area 4.) The airspace directly overlying Fort Worth Meacham is
 - A — Class B airspace to 10,000 feet MSL.
 - B — Class C airspace to 5,000 feet MSL.
 - C — Class D airspace to 3,200 feet MSL.

10. (Refer to Figure 12 on page 77.) Which of the reporting stations have VFR weather?
 - A — All.
 - B — KINK, KBOI, and KJFK.
 - C — KINK, KBOI, and KLAX.

11. (Refer to Figure 14 on page 77.) If the terrain elevation is 1,295 feet MSL, what is the height above ground level of the base of the ceiling?
 - A — 505 feet AGL.
 - B — 1,295 feet AGL.
 - C — 6,586 feet AGL.

12. (Refer to Figure 25 on the inside back cover.) (Refer to area 3.) The floor of Class B airspace at Dallas Executive Airport is

- A — at the surface.
- B — 3,000 feet MSL.
- C — 3,100 feet MSL.

13. (Refer to Figure 25 on the inside back cover.) (Refer to area 2.) The control tower frequency for Addison Airport is

- A — 122.95 MHz.
- B — 126.0 MHz.
- C — 133.4 MHz.

14. (Refer to Figure 23 on the inside front cover.) On what course should the VOR receiver (OBS) be set to navigate direct from Hampton Varnville Airport (area 1) to Savannah VORTAC (area 3)?

- A — 015°.
- B — 195°.
- C — 201°.

15. (Refer to Figure 15 on page 77.) The only cloud type forecast in TAF reports is

- A — Nimbostratus.
- B — Cumulonimbus.
- C — Scattered cumulus.

16. (Refer to Figure 4 on page 77.) What is the full flap operating range for the airplane?

- A — 55 to 100 kts.
- B — 55 to 208 kts.
- C — 55 to 165 kts.

17. (Refer to Figure 28 on page 79.) (Refer to illustration 5.) The VOR receiver has the indications shown. What radial is the aircraft crossing?

- A — 030°.
- B — 210°.
- C — 300°.

18. (Refer to Figure 25 on the inside back cover.) (Refer to area 5.) The VOR is tuned to the Dallas/Fort Worth VOR. The omnibearing selector (OBS) is set on 253°, with a TO indication, and a right course deviation indicator (CDI) deflection. What is the aircraft's position from the VOR?

- A — East-northeast.
- B — North-northeast.
- C — West-southwest.

19. (Refer to Figure 28 on page 79.) (Refer to illustration 3.) The VOR receiver has the indications shown. What is the aircraft's position relative to the station?

- A — East.
- B — Southeast.
- C — West.

20. Susceptibility to carbon monoxide poisoning increases as

- A — altitude increases.
- B — altitude decreases.
- C — air pressure increases.

21. Hazardous attitudes occur to every pilot to some degree at some time. What are some of these hazardous attitudes?

- A — Antiauthority, impulsivity, macho, resignation, and invulnerability.
- B — Poor situational awareness, snap judgments, and lack of a decision making process.
- C — Poor risk management and lack of stress management.

22. (Refer to Figure 9 on page 77.) (Refer to area C.) How should the flight controls be held while taxiing a tailwheel airplane with a left quartering tailwind?

- A — Left aileron up, elevator neutral.
- B — Left aileron down, elevator neutral.
- C — Left aileron down, elevator down.

23. Detonation occurs in a reciprocating aircraft engine when

- A — the spark plugs are fouled or shorted out or the wiring is defective.
- B — hot spots in the combustion chamber ignite the fuel/air mixture in advance of normal ignition.
- C — the unburned charge in the cylinders explodes instead of burning normally.

24. During a night flight, you observe a steady red light and a flashing red light ahead and at the same altitude. What is the general direction of movement of the other aircraft?

- A — The other aircraft is crossing to the left.
- B — The other aircraft is crossing to the right.
- C — The other aircraft is approaching head-on.

25. (Refer to Figure 47 on page 84.) Illustration A indicates that the aircraft is

- A — below the glide slope.
- B — on the glide slope.
- C — above the glide slope.

- 26.** What ATC facility should the pilot contact to receive a special VFR departure clearance in Class D airspace?
- A — Automated Flight Service Station.
 - B — Air Traffic Control Tower.
 - C — Air Route Traffic Control Center.
- 27.** When a control tower located on an airport within Class D airspace ceases operation for the day, what happens to the airspace designation?
- A — The airspace designation normally will not change.
 - B — The airspace remains Class D airspace as long as a weather observer or automated weather system is available.
 - C — The airspace reverts to Class E or a combination of Class E and G airspace during the hours the tower is not in operation.
- 28.** During operations within controlled airspace at altitudes of less than 1,200 feet AGL, the minimum horizontal distance from clouds requirement for VFR flight is
- A — 1,000 feet.
 - B — 1,500 feet.
 - C — 2,000 feet.
- 29.** Which condition would cause the altimeter to indicate a lower altitude than true altitude?
- A — Air temperature lower than standard.
 - B — Atmospheric pressure lower than standard.
 - C — Air temperature warmer than standard.
- 30.** Which condition is most favorable to the development of carburetor icing?
- A — Any temperature below freezing and a relative humidity of less than 50 percent.
 - B — Temperature between 32°F and 50°F and low humidity.
 - C — Temperature between 20°F and 70°F and high humidity.
- 31.** Prior to starting each maneuver, pilots should
- A — check altitude, airspeed, and heading indications.
 - B — visually scan the entire area for collision avoidance.
 - C — announce their intentions on the nearest CTAF.
- 32.** What determines the longitudinal stability of an airplane?
- A — The location of the CG with respect to the center of lift.
 - B — The effectiveness of the horizontal stabilizer, rudder, and rudder trim tab.
 - C — The relationship of thrust and lift to weight and drag.
- 33.** In the Northern Hemisphere, the magnetic compass will normally indicate a turn toward the south when
- A — a left turn is entered from an east heading.
 - B — a right turn is entered from a west heading.
 - C — the aircraft is decelerated while on a west heading.
- 34.** VFR approaches to land at night should be accomplished
- A — at a higher airspeed.
 - B — with a steeper descent.
 - C — the same as during daytime.
- 35.** Each pilot of an aircraft approaching to land on a runway served by a visual approach slope indicator (VASI) shall
- A — maintain a 3° glide to the runway.
 - B — maintain an altitude at or above the glide slope.
 - C — stay high until the runway can be reached in a power-off landing.
- 36.** When are the four forces that act on an airplane in equilibrium?
- A — During unaccelerated level flight.
 - B — When the aircraft is accelerating.
 - C — When the aircraft is at rest on the ground.
- 37.** What is an important airspeed limitation that is not color coded on airspeed indicators?
- A — Never-exceed speed.
 - B — Maximum structural cruising speed.
 - C — Maneuvering speed.
- 38.** Which in-flight advisory would contain information on severe icing not associated with thunderstorms?
- A — Convective SIGMET.
 - B — SIGMET.
 - C — AIRMET.
- 39.** The presence of ice pellets at the surface is evidence that there
- A — are thunderstorms in the area.
 - B — has been cold frontal passage.
 - C — is a temperature inversion with freezing rain at a higher altitude.
- 40.** Which statement best defines hypoxia?
- A — A state of oxygen deficiency in the body.
 - B — An abnormal increase in the volume of air breathed.
 - C — A condition of gas bubble formation around the joints or muscles.

- 41.** If the pitot tube and outside static vents become clogged, which instruments would be affected?
- A — The altimeter, airspeed indicator, and turn-and-slip indicator.
 - B — The altimeter, airspeed indicator, and vertical speed indicator.
 - C — The altimeter, attitude indicator, and turn-and-slip indicator.
- 42.** What action can a pilot take to aid in cooling an engine that is overheating during a climb?
- A — Reduce rate of climb and increase airspeed.
 - B — Reduce climb speed and increase RPM.
 - C — Increase climb speed and increase RPM.
- 43.** Which incident requires an immediate notification be made to the nearest NTSB field office?
- A — An overdue aircraft that is believed to be involved in an accident.
 - B — An in-flight radio communications failure.
 - C — An in-flight generator or alternator failure.
- 44.** With respect to the certification of airmen, which are categories of aircraft?
- A — Gyroplane, helicopter, airship, free balloon.
 - B — Airplane, rotorcraft, glider, lighter-than-air.
 - C — Single-engine land and sea, multiengine land and sea.
- 45.** A 100-hour inspection was due at 3302.5 hours. The 100-hour inspection was actually done at 3309.5 hours. When is the next 100-hour inspection due?
- A — 3312.5 hours.
 - B — 3402.5 hours.
 - C — 3395.5 hours.
- 46.** Prior to takeoff, the altimeter should be set to which altitude or altimeter setting?
- A — The current local altimeter setting, if available, or the departure airport elevation.
 - B — The corrected density altitude of the departure airport.
 - C — The corrected pressure altitude for the departure airport.
- 47.** When must a current pilot certificate be in the pilot's personal possession or readily accessible in the aircraft?
- A — When acting as a crew chief during launch and recovery.
 - B — Only when passengers are carried.
 - C — Anytime when acting as pilot in command or as a required crewmember.
- 48.** An airplane and an airship are converging. If the airship is left of the airplane's position, which aircraft has the right-of-way?
- A — The airship.
 - B — The airplane.
 - C — Each pilot should alter course to the right.
- 49.** As standard operating practice, all inbound traffic to an airport without a control tower should continuously monitor the appropriate facility from a distance of
- A — 25 miles.
 - B — 20 miles.
 - C — 10 miles.
- 50.** Unless each occupant is provided with supplemental oxygen, no person may operate a civil aircraft of U.S. registry above a maximum cabin pressure altitude of
- A — 12,500 feet MSL.
 - B — 14,000 feet MSL.
 - C — 15,000 feet MSL.
- 51.** The three takeoffs and landings that are required to act as pilot in command at night must be done during the time period from
- A — sunset to sunrise.
 - B — 1 hour after sunset to 1 hour before sunrise.
 - C — the end of evening civil twilight to the beginning of morning civil twilight.
- 52.** In regard to privileges and limitations, a private pilot may
- A — act as pilot in command of an aircraft carrying a passenger for compensation if the flight is in connection with a business or employment.
 - B — not pay less than the pro rata share of the operating expenses of a flight with passengers provided the expenses involve only fuel, oil, airport expenditures, or rental fees.
 - C — not be paid in any manner for the operating expenses of a flight.
- 53.** Under what condition, if any, may a pilot allow a person who is obviously under the influence of drugs to be carried aboard an aircraft?
- A — In an emergency or if the person is a medical patient under proper care.
 - B — Only if the person does not have access to the cockpit or pilot's compartment.
 - C — Under no condition.
- 54.** What is one purpose of wing flaps?
- A — To enable the pilot to make steeper approaches to a landing without increasing the airspeed.
 - B — To relieve the pilot of maintaining continuous pressure on the controls.
 - C — To decrease wing area to vary the lift.

55. Thunderstorms reach their greatest intensity during the

- A — mature stage.
- B — downdraft stage.
- C — cumulus stage.

56. A stable air mass is most likely to have which characteristic?

- A — Showery precipitation.
- B — Turbulent air.
- C — Poor surface visibility.

57. Every physical process of weather is accompanied by, or is the result of, a

- A — movement of air.
- B — pressure differential.
- C — heat exchange.

58. When requesting weather information for the following morning, a pilot should request

- A — an outlook briefing.
- B — a standard briefing.
- C — an abbreviated briefing.

59. Convective circulation patterns associated with sea breezes are caused by

- A — warm, dense air moving inland from over the water.
- B — water absorbing and radiating heat faster than the land.
- C — cool, dense air moving inland from over the water.

60. Where does wind shear occur?

- A — Only at higher altitudes.
- B — Only at lower altitudes.
- C — At all altitudes, in all directions.

Private Pilot Edition
Your Personal Flight Training Simulator

The Gleim X-Plane Flight Training Course integrates flight lessons from the Gleim Pilot Training Syllabus with the ultra realistic X-Plane 10 software. Experience all flight maneuvers at home with instruction, feedback, and post-flight evaluations.

Learn and practice flight maneuvers at home

- ➔ Over 100 training and tutorial videos
- ➔ Flight profiler and evaluation tool
- ➔ Build proficiency and confidence
- ➔ Develop aeronautical decision-making skills
- ➔ Learn maneuvers quickly and economically

For more information and system requirements, visit

FIGURE 25. — Sectional Chart Excerpt.

NOTE: Chart is not to scale and should not be used for navigation. Use associated scale.

AUTHORS' NOTE:

This syllabus must be individually approved by the local Flight Standards District Office (FSDO) before it is implemented in a Part 141 course of training. There is no approval requirement for Part 61 training.

The first edition was approved by AFS 800 of the FAA. AFS 800 typically only issues the letter once. The syllabus is a roadmap of how to use a multitude of Gleim pilot books and software to deliver an acceptable 141 compliant pilot training program. All Gleim pilot training products are updated on a regular and continuous basis to keep the Part 141 syllabus and training program current.

U.S. Department
of Transportation

Washington, DC 20591

DEC 17 1997

Mr. Irvin N. Gleim
420 N.W. 95 Blvd.
Gainesville, FL 32606

Dear Mr. Gleim:

We have reviewed the draft copy of the First Edition, Private Pilot Syllabus and Logbook, prepared by Irvin N. Gleim.

This combined private pilot syllabus and logbook is designed with references to other Irvin N. Gleim educational publications supporting pilot certification. As prepared, it appears to acceptably meet pertinent requirements under Title 14 Code of Federal Regulations parts 61 and/or 141 as a private pilot ground and flight training syllabus and record of training for persons who choose to pursue private pilot training and certification.

Sincerely,

Louis C. Cusimano
& Manager, General Aviation
and Commercial Division
